

Introducing CAM32 v4.05

We are excited to announce the release of CAM32 version 4.05! This upgrade is packed with new features, enhancements, and fixes. A complete list of changes can be found in the version Release Notes, while a condensed list of highlights can be found in the version Release Highlights. Both documents are available right on the 4.05 CD.

Here are some things to look for:

Support for the Symbol MC3000 PDT

This is the replacement to the Symbol PDT 3100. And it offers significantly more functionality than the old unit! You can upload your inventory to the unit for validation “on-the-fly” during scanning and can even fill in basic information for new items that will be created when you download the file back to CAM32.

In addition to the standard Physical Inventory process, you can also use the MC3000 for Inventory Adjustments, Purchasing/Receiving, Stock Transfer, Price Change Utility, Line Busters, and Gift Registry.

Purchase Order Item Search

With v4.05, you can now jump to a line by MFR Part Number, Item Number, Scancode (scannable), or any other field available in your search sequence defined for PO's. This is available in the Maintenance and Receiving modes and is quite a time-saver on large orders.

Discount Reason Codes

Create pre-defined Reason Codes that must be selected at POS when using the discount function. For tracking purposes, Reason Codes will print on the Transaction Register EOD report. They are also available for custom reporting via Sales Log Viewer.

i.CAM32 UPS Integration

For your i.CAM32 website ... online rate integration to UPS based on weight. Also requires i.CAM32 5.0.

Item Activity Viewer

Single Item Inquiry now contains a link to Item Activity Viewer, a one stop inquiry for historical BOH. This makes it easy to see an item's movement from various modules right on one screen.

E-Signatures on Invoices

If you're taking electronic signatures at POS, the signature image will now print on all 80-Column invoices (with image-capable printer, which includes most laser printers).

Customer Maintenance Field Restrictions

If you are using system passwords, you can restrict modify rights for specific fields on the customer record to only those with the highest level password. This field-specific definition is useful for those employees who do need modify rights to some fields on the customer record, but not all.

Current Software Versions

Current General Release Software:

CAM32 4.05 – NEW!
X-Charge 6.2.5

To obtain CAM32 Upgrades, login to the CAM32 Communities at www.camcommerce.com and click the link at the top of the web board to submit a CD request. Or, call Support to request the CD.

To obtain X-Charge Upgrades, open your X-Charge Server program and go to Help > Check for Updates (Internet Connection required). Or call Support to request a CD.

Upgrade Tips

- Upgrades are best scheduled for “first thing” in the morning, before the store is open for business and after you've confirmed:
 - ✓ A successful nightly backup
 - ✓ Completion of End of Day for previous day's sales
 - ✓ Completion of inter-store communications (if multi-store).
- If you have an i.CAM32 website, you must submit a Trouble Ticket at www.istarhelp.com to schedule the upgrade of your i.CAM32 server. Don't wait until after you've done the upgrade! Schedule it first.
- For multi-store locations, the upgrade must be completed at all locations before inter-store communications may resume. This means you'll want to conduct the upgrade on the same day at all locations.
