

Discount Reason Codes

Looking for the ability to apply specific reasons for discounts from Point of Sale?

Starting in version 4.05 you can add "Reason" codes for any discount given at Point of Sale. Once these codes are set up, any clerk giving a discount will have to select one of the defined reason codes when giving a discount.

First you have to define the Codes. (System Definition -> Define Lookup Codes then select "Discount Reasons" in the drop down menu.). You can add up to 255 different Reason codes that can be used when discounting items at Point of Sale.

After you have defined reason codes, they will automatically go into effect at Point of Sale. So whenever a discounted price is given on an item from Point of Sale, the clerk must choose one of the reasons before they can continue.

This function allows you the ability to report on these discount reason codes from the Sales Log Viewer (POS Control>Sales Log>Sales Log viewer) and the Transaction Register Report (POS Control>Transaction File Reports).

Current Software Versions

Current General Release Software:

CAM32 4.05
