

MicroBiz Newsletter

June 2011

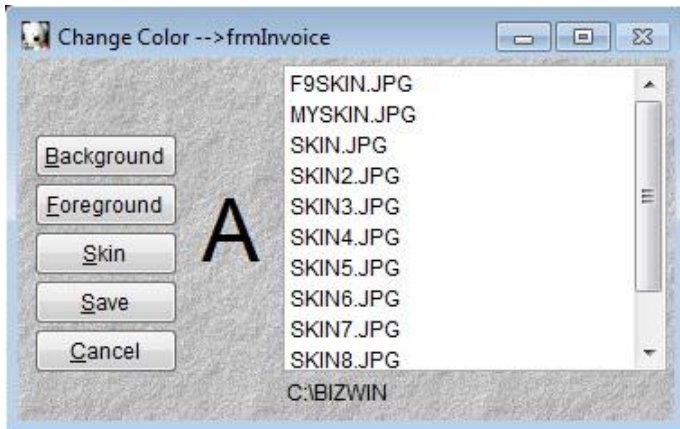

June gloom doesn't have to get you down!

Time to change that same old default color on the MicroBiz Work Screen!

Most backgrounds or borders or text lines within the MicroBiz work screen can be edited to show more flair and pizzazz. Sometimes the default can be boring, so change it up and give your work screen a new look.

When you Right-Click an area in the work screen you will activate the Change Color Dialogue seen below:

This option will allow you to change the background skin as shown in the above picture to be a rock slate texture. This can be changed to any of the preset options on the right of the grid.

BACKGROUND:

This allows you to change the background text color.

FOREGROUND:

This allows you to change the color of the text.

SKIN:

This allows you to change the background or skin as seen as a Rock Slate in the picture above.

SAVE:

This allows you to save your current color setup.

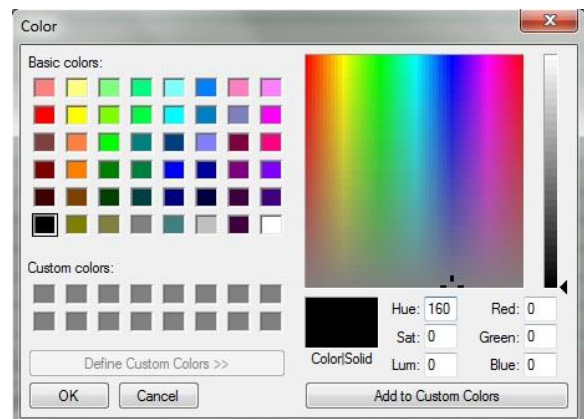

CANCEL:

This cancels any unsaved changes and takes you back to the prior window.

When you choose BACKGROUND, FOREGROUND or SKIN you should get the above Color Palette prompt allowing you to save the selected background or foreground or skin, to a simple solid color.

This color can be a predefined solid or you can define your own in Define Custom Colors >>
