

CAM Commerce recently announced a new version of our flagship Retail STAR product – version 9.5. We are actively upgrading Retail STAR customers, and based on initial feedback, our Retail STAR 9.5 customers are excited with the performance improvements and new features of this version.. Please call your sales representative today at 866-840-4443 to schedule your upgrade to 9.5 and start utilizing all the unique features the latest version of Retail STAR software has to offer!

Retail STAR 9.5 - Overview

Multi-store real time data

This option lets you connect all of your stores to one server. This simplifies hardware configurations and offers the user real time information. Depending upon the configuration, this new capability can also dramatically reduce the amount of computing hardware a store may need.

New version of Report STAR report writer

An improved version of Report STAR has arrived! It has a new look and feel, and includes many new exciting features. The Report STAR Wizard now walks you through the steps when creating custom reports. New report types include: Receipt, Corporate Inventory, and Corporate Sales. And the best part of all; large reports are now exponentially faster!

Membership Systems Interface

Retail STAR has expanded its support for 3rd party membership systems. In addition to existing support for the Raiser's Edge membership system, Retail STAR can now integrate with many other 3rd party membership programs easily.

Remote Login by Store

Employees can now log in to other stores at any location. This allows employees to perform work for other stores no matter where they may happen to be physically located.

Resend Remote Data

This new option lets you adjust a customer's accounts receivable balance by creating credit and debit memos towards the balance.

Corporate Reporting

The Franchise Data Warehouse allows Retail STAR to consolidate sales data from disparate systems and multiple locations. You can then consolidate this data, analyze it and generate meaningful and informative reports via the new Corporate Reporting options.

Decision Support Tool

The Decision Support Tool provides you with valuable information to assist you in transferring or ordering goods. For example, you can see that sizes 7.5 C and 7.5 E, but no size 7.5 D, are available in store 5; or sizes 30, 31, and 33 are in the warehouse, but not size 32. Knowing this information helps you decide what stock to shift and what to reorder.

Open To Buy Report & 3rdParty Interface

The Open to Buy option provides a way to plan and track inventory purchases in order to balance AP cash flow requirements with sales goals. The Open To Buy Link is an export utility that interfaces Retail STAR data to the Management One and RMSA Open to Buy systems. It will also export data into a tab-delimited format for easy importation into Microsoft Excel®, providing a simple way to build open to buy spreadsheets.

Promotions

The Promotions option allows you to offer special pricing in a variety of different ways. Mix and Match pricing structures are now supported through this new feature.

Linked Items

The Link Items option on the Maintenance menu lets you create a code representing a list of products that you want associated with a particular customer. The code can then be entered in the Linked Items tab in the customer record. For example, you could use this to keep a list of items that the customer needs buy.

Bulk PO Close

This option on the Purchasing menu lets you make a list of multiple PO's and close them all at once.

Fractional Quantities

Product quantities can now be represented by fractions of a whole. This allows retailers to sell items by weight (food, feed, etc.) or length (i.e. fabric, chains, ropes, etc.). Fractional quantities are represented as decimals throughout the system and reports.

Multi-store real time data

This option lets you connect all of your stores to one server. Query: How is this different than This simplifies hardware configurations and offers the user real time information. Depending upon the configuration, this new capability can also dramatically reduce the amount of computing hardware a store may need.
